## The Brain

There is apparently no modification of existing initial memories -- no insertions, no cut-and-paste -- only more and more experiences.

Images seen, sentences heard, pain felt, are all amassed as new memories and connected to existing memories in more ways than we can imagine today.

Some of these, of course, explain, refine, correct, reorganize, or completely replace things that were previously experienced (or seen or heard or read) in how they affect future behavior.
